Vision

Fly Web3 to da Mainstream

🎯 Starting from a Gasless RPC

Metaphor #1

Jetable sees CloudFlare as the counterpart in Web2 world.

Name	Business Model	Solution	Final Strategy	Market Cap
Jetable	B2B as a leverage 2C	1 Center Service (RPC) Diversified Functions Anti Sybil Attack	Open Platform Community-driven	24 Million
CloudFlare	B2B & B2C	1 Center Service (DNS) Diversified Functions Anti DDoS / CC	In House Dev	**18 Billion**

Jetable

Jetable enables **every blockchain DApp** to have **Gasless Web2 UX** instantly.

Easily accessible **RPC Level integration** and **minimizing code modification** lead to a secure, adaptable, and interconnected Web3 development platform.

Simplicity, speed, and dynamism will power the next wave of web3 projects, we make it **possible** for Web3 to be **mobile-first**.
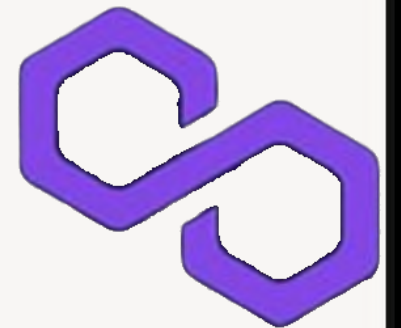

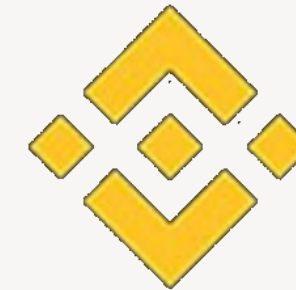

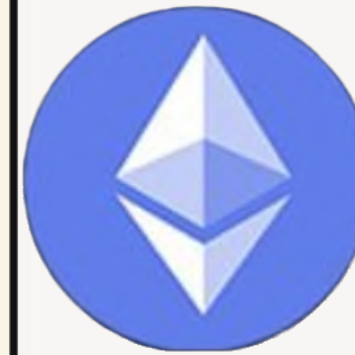

2 most significant barriers for mass adoption

Private Key Management

Native Assets

Existing services are solving different problems.

Solution		Focus and Differentiators
Argent		Building a user-friendly smart contract wallet with Web2 sign-in. Focused on Ethereum Orthodoxy Route, now pivoting to StarkNet and zkSync L2 wallet. Unlike Jetable, Argent started from BUIDLing a wallet, Jetable starts from gasless RPC, thus Jetable is wallet agnostic, even for MetaMask users.
Biconomy		Biconomy uses meta transactions to enable gasless transactions. Developer need to design their DApp with Biconomy Standard from Day One. No focused on RPC-Level solution or having third-party support DApp transaction (case like enabling a GameFi projects sponsoring users trading specific NFT gaslessly)

EIP 4337 is still a dream, or a narrative, given the code completeness, but we have a **better** solution,
**test in prod, now.**

btw what kind of problem do you **resolved** if your user still **needs $100 to create a wallet,** let alone the **backward compatibility**
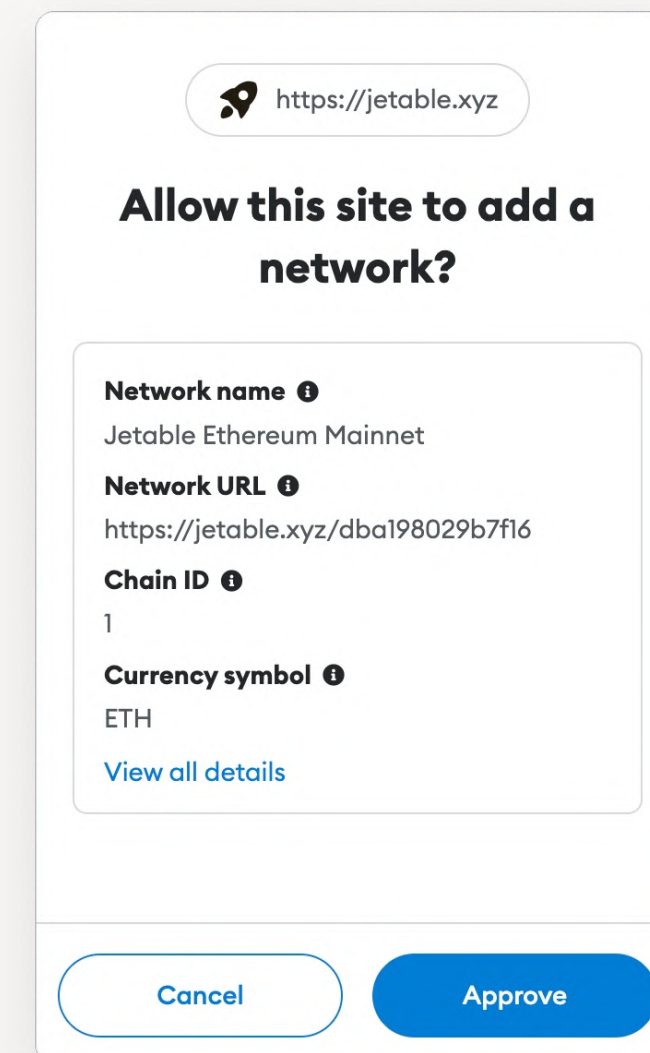

live demo @ 🚀**Jetable**

Jetable Gasless RPC

```
const ethers = require("ethers");

let rpcurl = 'https://jetable.xyz/dba198029b7f16'
const provider = new ethers.providers.JsonRpcProvider(rpcurl);
//Simply switch the rpc link to access the Jetable network

const contractInfo = require("./contractInfo.json");
const walletConf = require("./wallet.json");

async function main() {
    let wallet = new ethers.Wallet(walletConf[0]["pk"], provider);
    const Contract = new ethers.Contract(contractAddress, contractInfo.ABI,
contractInfo.contractAddress);
    let c = await Contract.functions.note("Jetable");
}

main()
```

Metaphor #2

## We build the Acquirer Layer for Web3

Gateway   L1 / L2s

Merchant   DApps

Issuer   Web3 User (Self Custody)

Cardholder   Web3 User

Acquirer   🚀 Jetable

Beyond the Gasless

Multichain Support

Full-support on EVM and
L2s

Customized Solutions

Case like Subsidizing
$UNI or $LOOKS HODLer
with gaslessly tx

**Leisurely
Transaction**

Submit your tx, deliver it
later with bulk to
magically save your gas

Proactive Defense

Protect DApps from
Sybil Attack / Airdrop
Hunters

Risk Control Engine

ML-powered to prevent
frauds like Registration,
Login and Anti-Cheating

On-Chain Trigger

"IFTTT" on-chain, like
squatting expiring ENS
domains

Break-even Strategy

RPC Part
- Time Machine Theory - case: parrot.rpcpool.com
- RPC Subscription & Gasless Network Fee
- Non-MEV Cashback System
- RPC-Level Sale Referral System (CPS Advertising Alliance)
- Staking

On-chain Trigger Part
- ENS Squatting
- Paper Your Hand

	Revenue / Subs / Customer	# of Customer / mo	Total Revenue / yr
ENS Squatting	$200	300	$720,000
Paper Your Hand	$200 / token	10 VC 5 Token Each	$120,000

ASK
$3mm

Structure: SAFE + Token Warrant

We can launch the Jetbale token in 18-36 months and will be the first fully functional, tokenized solution in a $100B market.

Product

Deliver the lowest friction UX building block in web3. Decentralize the protocol which can be easy to run, secure, and contribute.

Ecosystem

Expand presence and awareness among web3 developers.
Partner with existing networks, marketplaces, and dev tools. Retain with a incredible onboarding experience.

Key Milestones

Mainnet Support

Jetable availability on +5 L1/L2 mainnets.

EIP Submission

Turn Jetable Gasless Solution Into EIP.

Decentralize Jetable

Release Jetable token & protocol whitepaper.

Try Pitch

Manifesto

At Jetable, we are driven to accelerate the mainstream adoption to Web3.

Harnessing the total value of login & asset center means creating systems that promote the blockchain users to the first billion across borders and through time.

It also means that we need networks and protocols that are as dynamic as we are, so that digital experiences can build, grow, and change with us.

Jetable sits on the frontier of Web3.

We're exploring and experimenting with new ways to bring the dynamism of gaming, art, music, culture, and ultimately humanity to a new vision of the web.

We're home to those pursuing that vision, and we're ready to support them with tools, resources, and rewards.

We're here to build a new web. Together.
